	 DayofMonth: 1-31 DayOfWeek: 1 (Monday) - 7 (Sunday) DepTime: actual departure time (local, hhmm) CRSDepTime: scheduled departure time (local, hhmm) ArrTime: actual arrival time (local, hhmm) CRSArrTime: scheduled arrival time (local, hhmm) UniqueCarrier: unique carrier code FlightNum: flight number TailNum: plane tail number: aircraft registration, unique aircraft identifier ActualElapsedTime: in minutes CRSElapsedTime: in minutes 				
	 14. AirTime: in minutes 15. ArrDelay: arrival delay, in minutes: A flight is counted as "on time" if it operated less than 15 minutes later the scheduled time shown in the carriers' Computerized Reservations Systems (CRS). 16. DepDelay: departure delay, in minutes 17. Origin: origin IATA airport code 18. Dest: destination IATA airport code 19. Distance: in miles 20. Taxiln: taxi in time (the movement of an aircraft on the ground after landing), in minutes 21. TaxiOut: taxi out time (the movement of an aircraft on the ground before taking off), in minutes 22. Cancelled: 1 = yes, 0 = no 				
	 23. CancellationCode: reason for cancellation (A = carrier, B = weather, C = NAS, D = security) 24. Diverted: 1 = yes, 0 = no 25. CarrierDelay in minutes: Carrier delay is within the control of the air carrier. Examples of occurrences that may determine carrier delay are: aircraft cleaning, aircraft damage, awaiting the arrival of connecting passengers or crew, baggage, bird strike, cargo loading, catering, computer, outage-carrier equipment, crew legality (pilot or attendant rest), damage by hazardous goods, engineering inspection, fueling, handling disabled passengers, late crew, lavatory servicing, maintenance, oversales, potable water servicing, removal of unruly passenger, slow boarding or seating, stowing carry-on baggage, weight and balance delays. 26. WeatherDelay in minutes: Weather delay is caused by extreme or hazardous weather conditions that are forecasted or manifest themselves on point of departure, enroute, or on point of arrival. 27. NASDelay in minutes: Delay that is within the control of the National Airspace System (NAS) may include: non-extreme weather 				
[6]:	 conditions, airport operations, heavy traffic volume, air traffic control, etc. 28. SecurityDelay in minutes: Security delay is caused by evacuation of a terminal or concourse, re-boarding of aircraft because of security breach, inoperative screening equipment and/or long lines in excess of 29 minutes at screening areas. 29. LateAircraftDelay in minutes: Arrival delay at an airport due to the late arrival of the same aircraft at a previous airport. The ripple effect of an earlier delay at downstream airports is referred to as delay propagation. Conclusions from dataset: some columns have many NaN values if object types (5) are going to be used as a predictors, they should be converted from categorical to numerical

	 Pre-Processing Some features and observations does not give useful information. They will be deleted. As we have a lot of observations, we can delete all observations with NaN values. We will also remove categorical features because we have enough features to predict, so when can avoid more columns with one-hot encoding. If we need to improve prediction, then we can add it later. Observations to delete all flights cancelled (column 'Cancelled' = 1) 				
	 all flights diverted (column 'Diverted' = 1) Features to remove column 'Cancelled' column 'Diverted' column 'Year' column 'CancellationCode' Categorical Features to remove
